

~~CONFIDENTIAL~~

1. Applied Sciences

Astronomy: Passage instruments.

Land surveying: High precision cathetometers, differential cathetometers.

Geophysics: Torsion balances, static barometers, magnetic field scales.

Vibration technology: Touch vibration recorders, vibration meters, snap frequency meters, accelerometers, mechanical precision dilation meters, light-electric precision dilation meters, inductive static dilation meters, inductive dynamic dilation meter, "Lichtschreiber".

Meteorology: Ballotheodolite for visual and registering observation, optic multiple recorders.

Photogrammetry: Kinotheodolites.

Optics: Calipers, spherometers, spectrosopes, surface testers, collimators, test telescopes, lens strain tester, dynameters, diopter telescopes, prismic goniometers, field of view testing device, polarimeters, lenses, prisms, plano-spherical lens plates.

Microscopic-Optics: Micro-objectives, micro-oculars, micro-condensers.

2. Heating and factory technology

Measuring instruments: Pressure and amount meters for gas, air, steam, and liquids, measuring scales (Messwertwagen), water column minimeters, long-distance gas meter stations (Ferngasmessstationen), remote-control temperature measuring installations (Temperatur-Fernmessanlagen).

Regulators: Self-regulators for factories, firing regulators, pressure regulators, boiler regulators, water level regulators, temperature regulators, mixing regulators, blast furnace regulators, gas work regulators; complete measuring and regulating apparatus for power plants, foundries, chemical industry, mines, paper factories, cement factories, gas works, glass industry.

Photographic and moving picture technology

Photographic: Enlargement frames.

Moving picture: Projection apparatus for standard film, hand rollers.

Film treatment: Cutting tables.
